

1930s gilt and smoky quartz bracelet

Sold

Description

A 1930s gilt and smoky quartz bracelet with eight circular cut stones.

Smokey quartz is a variety of quartz crystal distinguished by its brown to greyish black colour, which results from natural irradiation of aluminium-containing rock. This gemstone is found world wide, with notable deposits in Brazil, Switzerland, and the United States.

Due to its durability and lustre, it is also a popular choice for ornamental carvings and decorative pieces.
