

Tiffany natural saltwater pearl necklace

Sold

Description

A fine Tiffany single-strand necklace of natural saltwater single pearls with a diamond and platinum clasp. Boxed and restrung by Tiffany. GCS Laboratory certified.

Natural saltwater pearls are formed within oceanic oysters and are highly valued for their rarity and lustrous quality. Unlike cultured pearls, they develop without human intervention. These pearls are renowned for their unique shapes, iridescent colours, and exceptional lustre, making them prized in fine jewellery for their natural beauty and elegance.

Pearls are unique gemstones that can improve with wear. The natural oils from human skin can enhance a pearl's lustre and colour over time, maintaining their beauty and sheen. Regular wear helps keep pearls hydrated, preventing them from drying out and cracking, thus preserving their delicate surface and radiant appearance.
